GFOA Best Practice

Selecting and Managing the Method of Sale of Municipal Bonds

Background. Note: This Best Practice (BP) is one of a group of five relating to the sale of bonds. These five BPs should be read and considered in conjunction with each other because of the interaction of the processes to which they apply. The five BPs are:

- Selecting and Managing the Method of Sale of Municipal Bonds
- Selecting and Managing of Municipal Advisors
- Selecting Bond Counsel
- Selecting Underwriters for Negotiated Bond Sales
- Pricing Bonds in a Negotiated Sale

State and local government bond issuers should sell their debt using the method of sale that is most likely to achieve the lowest cost of borrowing while taking into account both short-range and long-range implications for taxpayers and ratepayers. Differing views exist among issuers and other bond market participants with respect to the relative merits of the competitive and negotiated methods of sale. Moreover, research into the subject has not led to universally accepted findings as to which method of sale is preferable when taking into account differences in bond structure, security, size, and credit ratings for the wide array of bonds issued by state and local governments.

Concerns have been raised about the lack of a competitive process through the use of Request for Proposals (RFPs) in the selection of underwriters in a negotiated sale and the possibility of higher borrowing costs when underwriters are appointed based on factors other than merit. As a result, issuers have been forced to defend their selection of underwriters for negotiated sales in the absence of a documented, open selection process.

The appropriate duties, roles and responsibilities of municipal advisors and underwriters are often not well understood. Municipal advisors are the only parties with a federal fiduciary duty to state and local government issuers. In contrast, the relationship between the issuer and underwriter is one where the relationship has a common purpose but also some competing objectives, especially at the time of bond pricing. It is important for issuers to become familiar with the Securities and Exchange Commission's (SEC) Municipal Advisor Rule, and understand its implications on underwriter responsibilities as discussed in the materials related to the Municipal Advisor Rule. Resources to help issuers become familiar with the Rule are included in the References section of this document.

Recommendation. When state and local laws do not prescribe the method of sale of municipal bonds, the Government Finance Officers Association (GFOA) recommends that issuers select a method of sale based on a thorough analysis of the relevant rating, security, structure and other factors pertaining to the proposed bond issue. If the issuer has in-house expertise, defined as dedicated debt management staff whose responsibilities include daily management of a debt portfolio, this analysis and selection could be made by the issuer's staff. However, in the more common situation where an issuer does not have sufficient in-house expertise, this analysis and selection should be undertaken with the advice of a municipal advisor. Due to the inherent conflict of interest, issuers should not use a broker-dealer or potential underwriter to assist in the method of sale selection unless that firm has agreed not to underwrite that transaction. Additionally, Municipal Securities Rulemaking Board (MSRB) Rule G-23 states that a broker-dealer firm may not serve as municipal advisor and underwriter on the same transaction.

The GFOA believes that the presence of the following factors may favor the use of a competitive sale:

- The rating of the bonds, either credit-enhanced or unenhanced, is at least in the single-A category.
- 2. The bonds are general obligation bonds or full faith and credit obligations of the issuer or are secured by a strong, known and long-standing revenue stream.
- 3. The structure of the bonds does not include innovative or new financing features that require extensive explanation to the bond market.
- **4.** The issuer is well known and frequently in the market.

Similarly, GFOA believes that the presence of the following factors may favor the use of a negotiated sale:

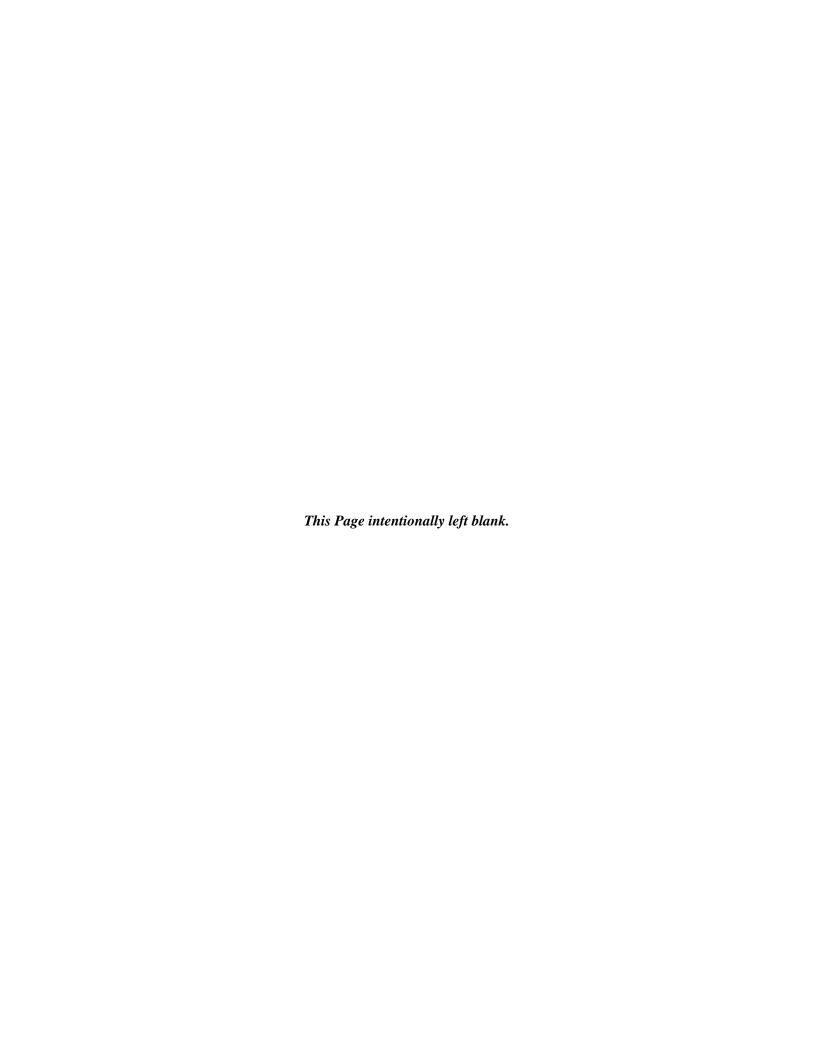

- 1. The rating of the bonds, either credit-enhanced or unenhanced, is lower than single-A category.
- 2. Bond insurance or other credit enhancement is unavailable or not cost-effective.
- The structure of the bonds has features such as a pooled bond program, variable rate debt, deferred interest bonds, or other bonds that may be better suited to negotiation.
- **4.** The issuer desires to target underwriting participation to include disadvantaged business enterprises (DBEs) or local firms.
- Other factors that the issuer, in consultation with its financial advisor, believes favor the use of a negotiated sale process.

If an issuer, in consultation with its financial advisor, determines that a negotiated sale is more likely to result in the lowest cost of borrowing, the issuer should undertake the following steps and policies to increase the likelihood of a successful and fully documented negotiated sale process:

1. There should be a written contractual relationship with a municipal advisor (a firm unrelated to the underwriter(s)), to advise the issuer on all aspects of the

- sale, including selection of the underwriter, structuring, disclosure preparation and bond pricing.
- 2. Select the underwriter(s) through a formal request for proposals (RFP) process. The issuer should document and make publicly available the criteria and process for underwriter selection so that the decision can be explained, if necessary.
- 3. Due to potential conflicts of interest, the issuer should also enact a policy regarding whether and under what, if any, circumstances it will permit the use of a single firm to serve as an underwriter on one transaction and a municipal advisor on another transaction.
- 4. Issuers with sufficient in-house expertise and access to market information may not need to retain a municipal advisor. Such issuers should have at least the following skills and information: (i) access to real-time market information (e.g. Bloomberg) to assess market conditions and proposed bond prices; (ii) experience in the pricing and sale of bonds, including historical pricing data for their own bonds and/or a set of comparable bonds of other issuers in order to assist in determining a fair price for their bonds; and (iii) dedicated full-time staff to manage the bond issuance process, with the training, expertise and access to debt management tools necessary to successfully negotiate the pricing of their bonds.
- **5.** Remain actively involved in each step of the negotiation and sale processes in accordance with the GFOA's Best Practice, Pricing Bonds in a Negotiated Sale.
- 6. Require that financial professionals make disclosures pursuant to MSRB Rule G-17 and disclose any conflicts of interest that may exist, as well as the name(s) of any person or firm compensated to promote the selection of the underwriter; any existing or planned arrangements between outside professionals to share tasks, responsibilities and fees; the name(s) of any person or firm with whom the sharing is proposed; and the method used to calculate the fees to be earned.
- 7. Review the "Bond Purchase Agreement" and "Agreement Among Underwriters" and ensure that the terms and conditions are acceptable to the issuer and identify issues that need to be negotiated with the underwriters.
- 8. Openly disclose public-policy issues such as the desire for Minority, Women and Disadvantaged Business Enterprises (MWDBEs) and regional firm participation in the syndicate and the allocation of bonds to such firms as reason for negotiated sale; measure and record results at the conclusion of the sale.
- 9. Prepare a post-sale summary and analysis that documents the pricing of the bonds relative to other similar transactions priced at or near the time of the issuer's bond sale, and record the true interest cost of the sale and the date and hour of the verbal award.

Finally, as noted above, it is important for issuers to become familiar with and understand the Municipal Advisor Rule's implications on underwriter responsibilities as discussed in the materials related to the Municipal Advisor Rule.

Summary of Texas Public School Debt-Cost Comparison Survey

[&]quot;C" = Competitive Bid "N" = Negotiated Sale

Notes:

⁽¹⁾ No interest cost difference was calculated unless both competitive and negotiated sales had principal maturities in the same years; "Compared Principal." Underwriting fee differences were calculated on "Compared Principal." Interest cost differences were calculated based on yield-to-maturity differences among bond sales relative to the national "AAA" municipal bond daily index published by Municipal Market Data to account for, and adjust for, any changes during the respective week in the overall interest rate market.

^{\$7.1} Billion of otherwise comparable negotiated sales were omitted from cost comparisons because there were no competitive bids that week.

^{\$2.6} Billion of negotiated sales were omitted from cost comparisons because debt structure, security, or call features were not comparable.

This "Debt Cost Comparison Study" is presented by USCA Municipal Advisors (USCA). USCA serves as Financial Advisor to over 80 education issuers and more than 70 cities, counties and special districts—all in the State of Texas. One of many fiduciary responsibilities USCA has is to assure its clients that their borrowing rates are the lowest possible each time they enter the capital markets.

Over the last several years, USCA has observed material pricing differentials (on a yield to maturity (YTM) basis) on very similar credits when priced "competitively" versus when priced "negotiated". It appeared that transactions priced using a competitive sale process were receiving much lower YTMs than when priced using a negotiated sale process. The YTM differences in some cases were substantial.

For Bank Qualified issuances (less than 10MM in a calendar year), the pricing differentials have often times been considerable—with competitive sales receiving better bids (lower interest rates) than similar negotiated sales. We have just completed an in depth study of all Non-BQ Texas PSF sales for 2015. There are many variables when conducting such a study, but we felt as though the increased spreads between the YTMs of competitive sales versus negotiated sales merited such a review. Our findings are presented in the attached study. Once again the competitive sale process resulted in lower borrowing costs—some of which were dramatic.

Competitive bond sales can minimize costs

Savings can be converted to:

- Debt burden reduction, and
- Additional debt capacity without increasing tax rates

Research Question: What is the potential cost difference for Texas public school districts that elect the competitive instead of negotiated bond sale process?

US Capital Advisors examined all non-Bank-Qualified bond sales (> \$10 million per calendar year) of Texas public school districts for 2015 that were guaranteed by the Texas Permanent School Fund. We compared the YTM of issues sold using a competitive sale process to those sold during the same week using a negotiated sale process.

Research results show a consistent and materially higher cost for negotiated sales when compared to the cost for competitive sales.

• Competitive sale bid award is typically based on lowest true interest cost (TIC), which includes the underwriting fees.

If for 2015 ⁽¹⁾, the 20 competitive bond sales received underwriting fees and YTM that were equal to those of the 67 negotiated sales, and vice versa:

- Competitive bond sales could have cost an additional \$17.4 million.
- Negotiated bond sales could have cost an additional \$85 million.

Approximately \$7.1 billion of 2015 Texas ISD PSF Non-BQ negotiated sales occurred in weeks when no comparable competitive sales took place. An additional \$2.6 billion of sales were not comparable because of differences in credit enhancement (PSF), maturity structure, interest rate type, and other factors. NO cost differential was calculated for these negotiated bond sales.

⁽¹⁾ Sales included in this review, and listed in Tab 16.

- Quality desired is defined in bid specifications;
- Sale is awarded to lowest cost bidder;
- Thousands of dollars can be saved.

Competitive sales ("Bids") for refunding & construction bonds obtained lowest total cost:

- No quality differences when the commodity bid is money;
- Competitive sales are awarded to the bidder offering the lowest true interest cost (TIC);

Millions of dollars can be saved.

Historical Bond Sale Trends

Fair-pricing YTM benchmarks are now rarely available as frequency of competitive bond sales decline as illustrated below.

	1991 to 2000	2001 to 2010	2011 to 2015
Percentage of Texas Public School Bonds (Non-BQ) Sold by Competitive	43.54%	12.54%	10.46%
Bid*	45. 5 4 / 0	12.57/0	10.40 / 0

Myths About Negotiated Sale "Flexibility Benefits"

When competitive sales were conducted by fax and/or walk-in bids, negotiated sales had more "flexibility" with respect to pricing dates/times, resizing flexibility and for IRS Compliance. This is no longer true!

Electronic bidding services now provide equal "flexibility" for competitive sales. Research shows some competitive sale dates are being rescheduled with as little as 24-hours notice.

Competitive bidding can minimize undesirable bond types, like:

- Excessive premium and excessive discount bonds;
- Long-maturity capital appreciation (zero coupon) bonds.

"Flexibility" is no longer valid reason to negotiate refundings, because competitive sales have flexibility and can have much lower total costs.

Since 2013, USCA has completed 77 refundings by the competitive sale process. The Notice of Sale (NOS) provisions allow for certain adjustments to meet refunding and/or debt service requirements.

Our study suggests that negotiated sales have produced consistently higher total costs than competitive sales. The case for considering the competitive sale process is compelling.

The following are excerpts from a June 20, 2014 <u>Wall Street Journal</u> article by S. Patterson, "SEC Chairman Unveils Plan to Boost Transparency in Bond Markets"

The top U.S. securities regulator wants to make the bond market fairer for small investors, and that could take a bite out of profits for Wall Street's biggest banks. Securities and Exchange Commission Chairman Mary Jo White unveiled plans Friday to make pricing information in the combined \$14 trillion corporate- and municipal-bond markets easier to get. Ms. White said such data are difficult for average investors to obtain, giving an advantage to powerful market intermediaries such as Wall Street banks.

To even the playing field, Ms. White suggested requiring public dissemination of the best buy and sell orders generated on private electronic networks for corporate and municipal bonds that are accessed primarily by market insiders.

Currently, investors typically see prices only after a trade is executed. "This potentially transformative change would broaden access to pricing information that today is available only to select parties," Ms. White said in a speech at the Economic Club in New York.

In a speech two weeks ago, Ms. White vowed to ratchet up oversight of computer-driven trading, a push that could ultimately dull the edge such high-speed traders enjoy.

The bond market initiatives, while still in the planning stage, could deliver a blow to big Wall Street banks that dominate bond trading, while benefiting regular investors who have largely been shut out of the inner workings of the bond market, observers said. Wall Street's fixed-income businesses already are being buffeted by new rules on capital and risk-taking, and a drop in client trading.

Fund managers who invest in corporate and municipal debt would be among the biggest beneficiaries of the move, because they would have a better idea about how much supply and demand existed in the market for bonds they want to trade. "Transparency is huge," said Scott Pritchard, a principal of Capital Directions, an Atlanta wealth manager with \$2.2 billion in 401(k) assets under management. "I absolutely love the angle that they're taking."

The push for more price transparency in bond trading has been a focus for the SEC for the past few years. In a July 2012 report on trading in the municipal-bond market, the agency wrote that pretrade information in municipal bonds "is not broadly accessible by the public, but rather is generally available only to participating municipal-bond dealers."

The Financial Industry Regulatory Authority, Wall Street's self-regulator, has been probing trading profits of banks and other middlemen in certain bond transactions, crunching reams of trading data for instances in which the middlemen have earned unusually large profits, The Wall Street Journal reported in April. Unlike the stock market, in which exchanges publish buy and sell orders in real time, there is little way for most investors to check demand for bonds. That gives brokers ample room to potentially slap extra costs on bonds they are selling, and customers often can't tell whether they were overcharged until minutes after the trade is completed.

"Reporting up to now has all been post-trade," said Robert Smith, chief investment officer at Sage Advisory Services, who oversees \$11 billion of fixed-income assets. "You either felt happy or you felt a fool about where you traded."

The plan bears similarities to changes the SEC implemented in the stock market in the late 1990s, which made trading information about stocks far more widely available to regular investors and gave a boost to day trading in stocks. By giving regular investors a better idea about supply and demand in bond trading, it could possibly generate more demand from individual investors. Increased transparency can make bond trading easier and "if more areas of the market become more liquid, then that's definitely good for us," said Scott Mather, deputy chief investment officer at Pacific Investment Management Co., manager of the world's largest bond mutual fund.

Ms. White said the SEC also plans to work with other market regulators, such as Finra and the Municipal Securities Rulemaking Board, to complete a rule outlining best-execution standards for municipal bonds. The SEC also will work with the two groups to develop new rules regarding the disclosure of "markups," or added charges, brokers tack onto certain trades in municipal and corporate bonds on behalf of clients.

Patterson, S. (2014, June 20). SEC Chairman Unveils Plan to Boost Transparency in Bond Markets. *The Wall Street Journal*.

Internal Process Controls Matter

This and any internal control discussion is not a statement about any entity. Rather, our analysis focuses on the primary internal control components of risk assessment, information gathering, communication, control and monitoring activities that could improve enterprise risk management related to municipal bond sales in the current market environment.

<u>Risk assessment</u>: The magnitude of cost differences found between the competitive-bid and negotiated bond sale processes warrant a sharpened analysis of internal controls related to controlling and monitoring municipal bond sales.

<u>District specific risk assessment</u>: If YTM on your last bond sale closely matched those of comparable competitive bond sales then the risk of incurring material additional costs seems mitigated. If not, more information gathering, communication, and control and monitoring activities may be necessary to protect taxpayer interests.

<u>Information gathering</u>: Was your district informed that competitive sales can attain lower total costs or advised to sell bonds using a competitive sale process?

If the sale was negotiated, were underwriters also typical competitive-sale winning bidders? Were YTM results of recent comparable competitive-bid and negotiated bond sales made available for benchmarking purposes prior to bond sale approval? Does your financial advisor also underwrite for advisory clients of firms selected as your negotiated underwriters? What volume of negotiated bond principal and what approximate volume of total underwriting fees is represented by these bond sales?

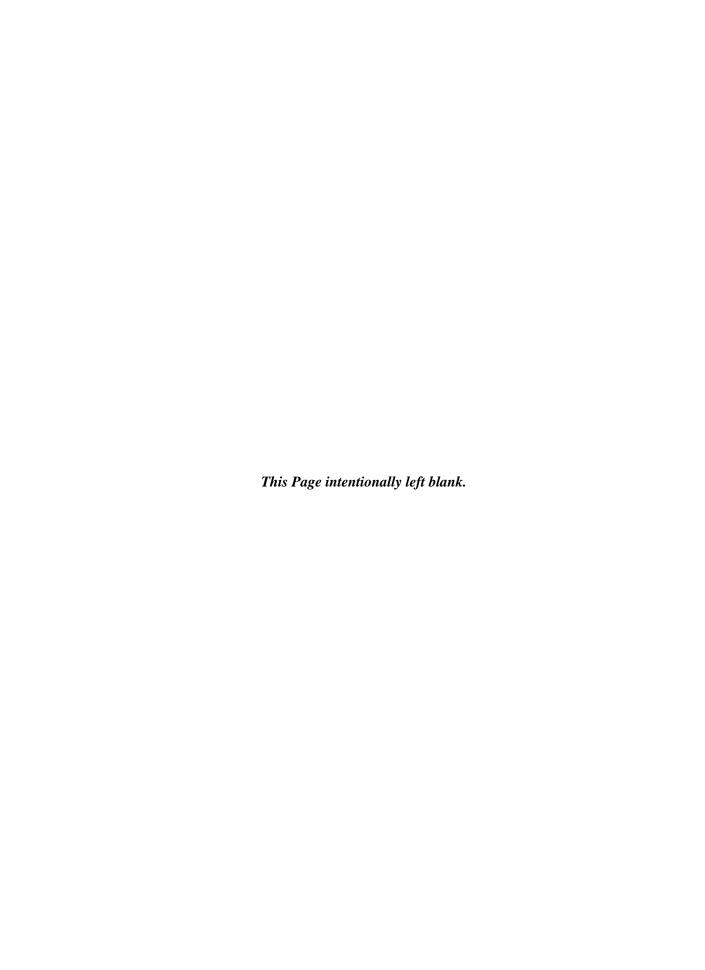

Support the SEC's efforts to continue to improve transparency:

- The public should have the same information access as Advisors and Underwriters
- If real-time buy/sell order information is available to the general investing public, increased investor demand has the potential to reduce interest costs for public school districts.

Demand transparency:

- Were ISDs told competitive sales may attain lower costs?
- Was YTM disclosed to the ISD in addition to yields to call?
- Were risks and potential additional costs associated with callable, premium bonds disclosed to the ISD?
- Were possible lower cost alternatives available and discussed?

Notes:

The following weekly comparisons explore the potential cost incurred by several Texas Public Schools that elected to sell bonds using a negotiated sale methodology instead of a competitive sale. Similarly, it explores the potential savings realized by districts that elected to sell bonds using a competitive methodology instead of a negotiated sale. The summary page of each comparison highlights the potential savings and costs we have calculated for that week.

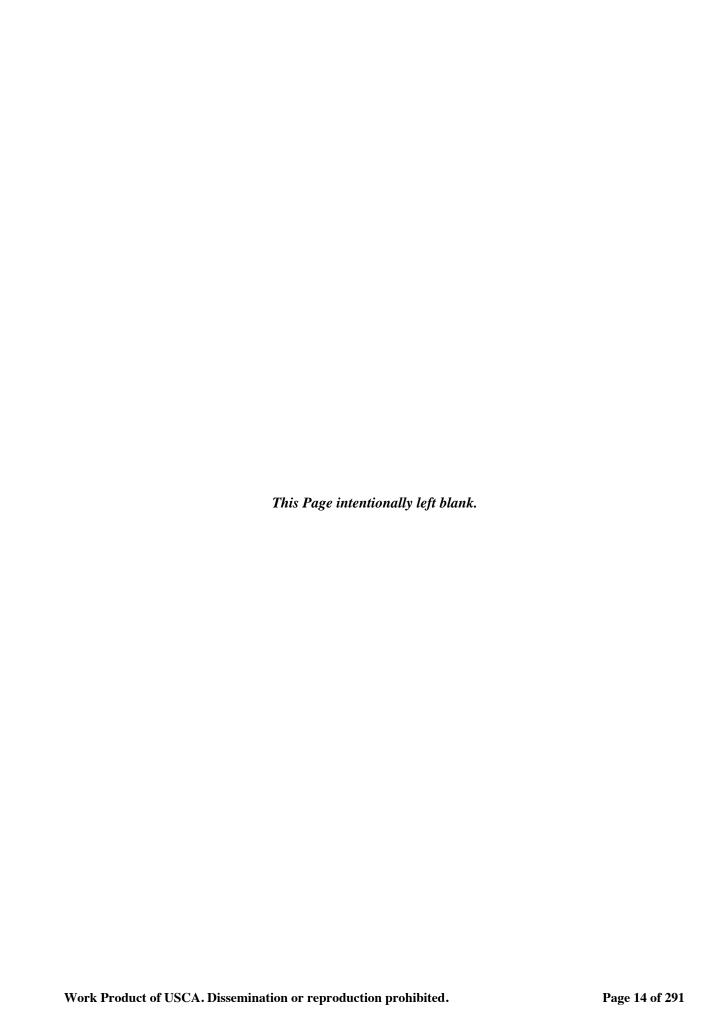

Methodology:

We compare all same-week, Permanent School Fund guaranteed, non-bank-qualified, current interest bond (CIB) sales with similar amortization schedules and call features. Every week where both competitive and negotiated sales occurred and in which sales met these criteria are included in the following study.

No interest cost difference was calculated for any maturity unless both competitive and negotiated sales had principal amounts in those years. Underwriting fee differences were calculated on the same principal maturities used to calculated interest savings (costs). Capital appreciation bonds (CAB or zero-coupon) were excluded from the calculations.

We did not want to measure cost differences that resulted merely from changes in market interest rates when, for example, one issue priced Tuesday and another priced Wednesday. So, we calculated the extent to which each issue's yields to maturity (YTM) exceeded MMD (Municipal Market Data's national daily AAA annual and interpolated yield indices) as of its respective pricing date.

This YTM spread to MMD became the basis for measuring whether competitive sales attained higher or lower interest costs than comparable negotiated sales. MMD's interpolated index was used through 2028 and MMD was used 2029 and longer to equate YTMs on August versus February principal maturities.

⁽¹⁾ No interest cost difference was calculated for any maturity unless both competitive and negotiated sales had principal amounts in those years. Underwriting fee differences were calculated on the same principal maturities used to calculate interest cost savings.

There were no other negotiated sales in the months of May, September, October and weeks not listed, that met the criteria for comparison in this study.

	Total A	Additional Costs	s resulting from	the Negotiated Sale Process:	\$ 3,693,489

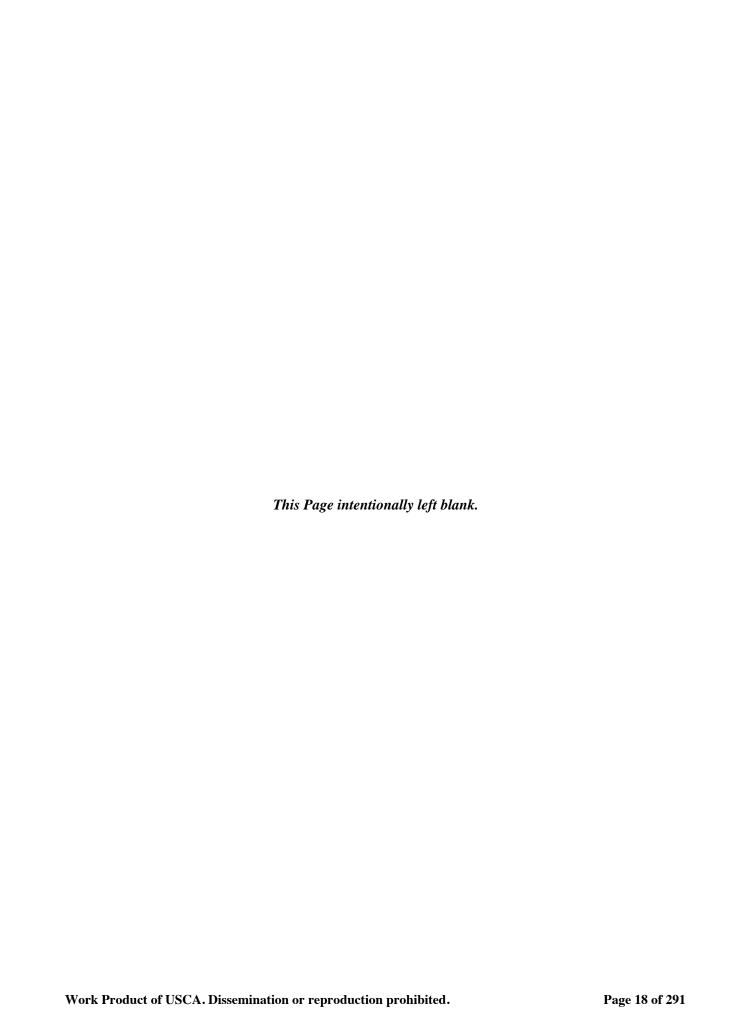

Notes:

Research Question: What is the potential difference in cost incurred by a Texas independent school district that elects to sell bonds using competitive (sealed-bid) sale, instead of a negotiated sale methodology?

Research Method: All same-week, Permanent School Fund guaranteed, non-bank-qualified, current interest bond (CIB) sales are included in each weekly set of cost comparisons.

No interest cost difference was calculated for any maturity unless both competitive and negotiated sales had principal amounts in those years and underwriting fee differences were calculated on the same principal maturities used to calculated interest cost savings. Capital appreciation bonds (CAB or zero-coupon) and issues not guaranteed by the Texas Permanent School Fund were excluded from cost calculations to maintain comparability.

We also did not want to measure cost differences that resulted merely from changes in market interest rates when, for example, one issue priced Tuesday and another priced Wednesday. So, we calculated the extent to which each issue's yields to maturity (YTM) exceeded MMD (Municipal Market Data's national daily AAA annual and interpolated yield indices) as of its respective pricing date. This YTM spread to MMD became the basis for measuring whether competitive sales attained higher or lower interest costs than comparable negotiated sales. MMD's interpolated index was used through 2028 and MMD was used 2029 and longer to equate YTMs on August versus February principal maturities.

Notes:

Research Question: What is the potential difference in cost incurred by a Texas independent school district that elects to sell bonds using competitive (sealed-bid) sale, instead of a negotiated sale methodology?

Research Method: All same-week, Permanent School Fund guaranteed, non-bank-qualified, current interest bond (CIB) sales are included in each weekly set of cost comparisons.

No interest cost difference was calculated for any maturity unless both competitive and negotiated sales had principal amounts in those years and underwriting fee differences were calculated on the same principal maturities used to calculated interest cost savings. Capital appreciation bonds (CAB or zero-coupon) and issues not guaranteed by the Texas Permanent School Fund were excluded from cost calculations to maintain comparability.

We also did not want to measure cost differences that resulted merely from changes in market interest rates when, for example, one issue priced Tuesday and another priced Wednesday. So, we calculated the extent to which each issue's yields to maturity (YTM) exceeded MMD (Municipal Market Data's national daily AAA annual and interpolated yield indices) as of its respective pricing date. This YTM spread to MMD became the basis for measuring whether competitive sales attained higher or lower interest costs than comparable negotiated sales. MMD's interpolated index was used through 2028 and MMD was used 2029 and longer to equate YTMs on August versus February principal maturities.

Additional Interest Costs from S	elling Negotiated : \$2,60	43,24	15
Total Additional Costs resulting from the Negoti	iated Sale Process: \$3,79	99,80)9

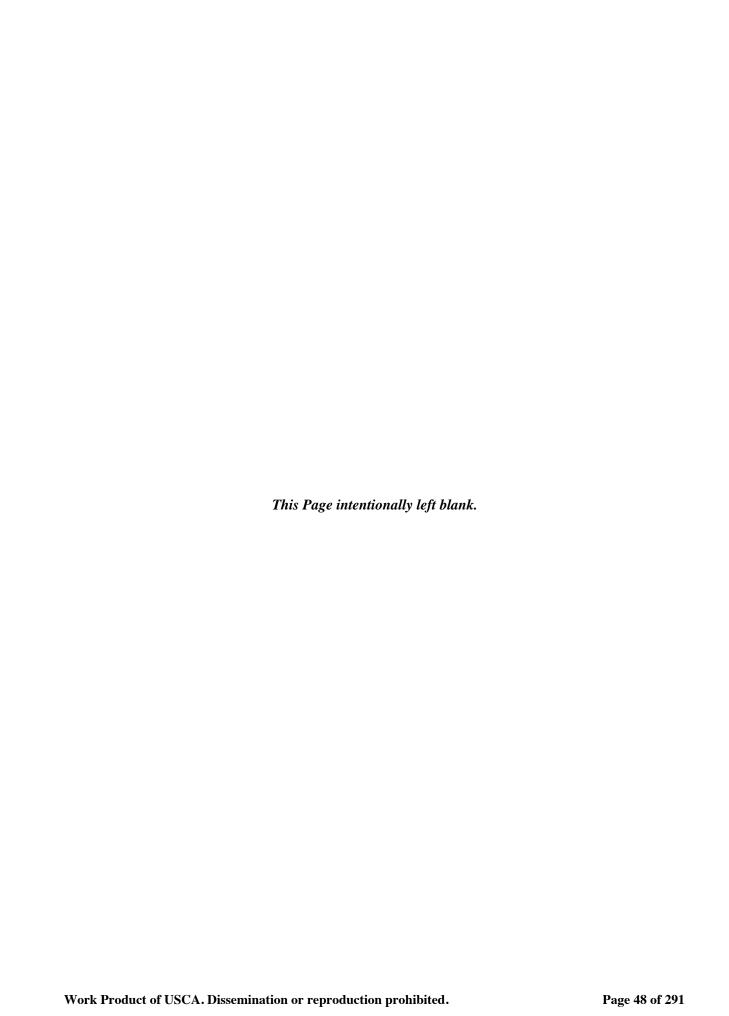

Notes:

Research Question: What is the potential difference in cost incurred by a Texas independent school district that elects to sell bonds using competitive (sealed-bid) sale, instead of a negotiated sale methodology?

Research Method: All same-week, Permanent School Fund guaranteed, non-bank-qualified, current interest bond (CIB) sales are included in each weekly set of cost comparisons.

No interest cost difference was calculated for any maturity unless both competitive and negotiated sales had principal amounts in those years and underwriting fee differences were calculated on the same principal maturities used to calculated interest cost savings. Capital appreciation bonds (CAB or zero-coupon) and issues not guaranteed by the Texas Permanent School Fund were excluded from cost calculations to maintain comparability.

We did not want to measure cost differences that resulted merely from changes in market interest rates when, for example, one issue priced Tuesday and another priced Wednesday. So, we calculated the extent to which each issue's yields to maturity (YTM) exceeded MMD (Municipal Market Data's national daily AAA annual and interpolated yield indices) as of its respective pricing date. This YTM spread to MMD became the basis for measuring whether competitive sales attained higher or lower interest costs than comparable negotiated sales. MMD's interpolated index was used through 2028 and MMD was used 2029 and longer to equate YTMs on August versus February principal maturities.

Notes:

Research Question: What is the potential difference in cost incurred by a Texas independent school district that elects to sell bonds using competitive (sealed-bid) sale, instead of a negotiated sale methodology?

Research Method: All same-week, Permanent School Fund guaranteed, non-bank-qualified, current interest bond (CIB) sales are included in each weekly set of cost comparisons.

No interest cost difference was calculated for any maturity unless both competitive and negotiated sales had principal amounts in those years. Underwriting fee differences were calculated on the same principal maturities used to calculated interest cost savings. Capital appreciation bonds (CAB or zero-coupon) and issues not guaranteed by the Texas Permanent School Fund were excluded from cost calculations to maintain comparability.

We did not want to measure cost differences that resulted merely from changes in market interest rates when, for example, one issue priced Tuesday and another priced Wednesday. So, we calculated the extent to which each issue's yields to maturity (YTM) exceeded MMD (Municipal Market Data's national daily AAA annual and interpolated yield indices) as of its respective pricing date. This YTM spread to MMD became the basis for measuring whether competitive sales attained higher or lower interest costs than comparable negotiated sales. MMD's interpolated index was used through 2028 and MMD was used 2029 and longer to equate YTMs on August versus February principal maturities.

Notes:

Research Question: What is the potential difference in cost incurred by a Texas independent school district that elects to sell bonds using competitive (sealed-bid) sale, instead of a negotiated sale methodology?

Research Method: All same-week, Permanent School Fund guaranteed, non-bank-qualified, current interest bond (CIB) sales are included in each weekly set of cost comparisons.

No interest cost difference was calculated for any maturity unless both competitive and negotiated sales had principal amounts in those years. Underwriting fee differences were calculated on the same principal maturities used to calculated interest cost savings. Capital appreciation bonds (CAB or zero-coupon) and issues not guaranteed by the Texas Permanent School Fund were excluded from cost calculations to maintain comparability.

We did not want to measure cost differences that resulted merely from changes in market interest rates when, for example, one issue priced Tuesday and another priced Wednesday. So, we calculated the extent to which each issue's yields to maturity (YTM) exceeded MMD (Municipal Market Data's national daily AAA annual and interpolated yield indices) as of its respective pricing date. This YTM spread to MMD became the basis for measuring whether competitive sales attained higher or lower interest costs than comparable negotiated sales. MMD's interpolated index was used through 2028 and MMD was used 2029 and longer to equate YTMs on August versus February principal maturities.

Summary Total Cost Comparison -- Competitive Versus Negotiated Sale Process -- Week of April 13, 2015

npetitive Sale(s)	
Priced: 4/16/15	
npetitive Sale Underwriting Fee %: 0.6	669 %
Total Bond Principal Amount: \$16,040 stal Comparable Principal Amount: \$11,190 Savings from Selling Competitively:	-
	\$ 730
Savings from Selling Competitively: \$75	73,392
	74,122

Nego	tiated Sale(s)
Ennis IS	SD Priced: 4/13/15
Frenship IS	
Keller IS	
Roma IS	SD Priced: 4/15/15
Willis IS	SD Priced: 4/15/15
Average Neg	gotiated Sale Underwriting Fee %: 0.676 %
	Total Bond Principal Amount: \$ 196,455,000
Total	tal Comparable Principal Amount: \$ 196,455,000
Additional Underwi	riting Fee from Selling Negotiated:
0.676 % - 0.669 % =	0.007% \$ 12,820
Additional Inter	rest Costs from Selling Negotiated: \$ 1,916,763
Total Additional Costs resulting	g from the Negotiated Sale Process: \$ 1,929,584

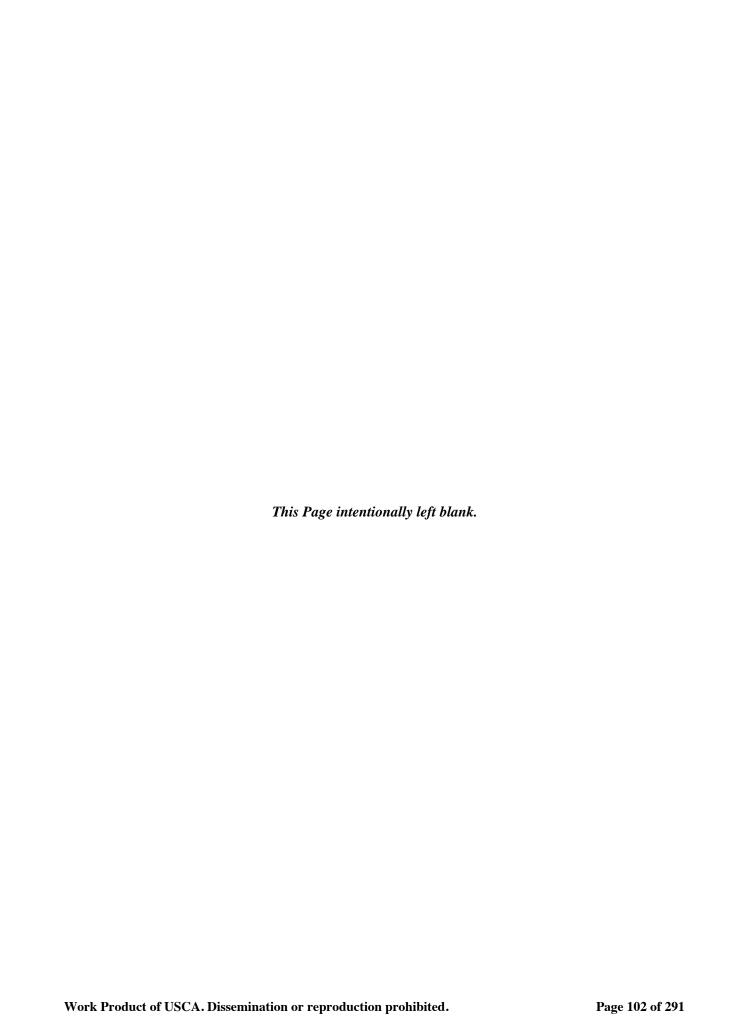

Notes:

Research Question: What is the potential difference in cost incurred by a Texas independent school district that elects to sell bonds using competitive (sealed-bid) sale, instead of a negotiated sale methodology?

Research Method: All same-week, Permanent School Fund guaranteed, non-bank-qualified, current interest bond (CIB) sales are included in each weekly set of cost comparisons.

No interest cost difference was calculated for any maturity unless both competitive and negotiated sales had principal amounts in those years. Underwriting fee differences were calculated on the same principal maturities used to calculated interest cost savings. Capital appreciation bonds (CAB or zero-coupon) and issues not guaranteed by the Texas Permanent School Fund were excluded from cost calculations to maintain comparability.

We did not want to measure cost differences that resulted merely from changes in market interest rates when, for example, one issue priced Tuesday and another priced Wednesday. So, we calculated the extent to which each issue's yields to maturity (YTM) exceeded MMD (Municipal Market Data's national daily AAA annual and interpolated yield indices) as of its respective pricing date. This YTM spread to MMD became the basis for measuring whether competitive sales attained higher or lower interest costs than comparable negotiated sales. MMD's interpolated index was used through 2028 and MMD was used 2029 and longer to equate YTMs on August versus February principal maturities.

Notes:

Research Question: What is the potential difference in cost incurred by a Texas independent school district that elects to sell bonds using competitive (sealed-bid) sale, instead of a negotiated sale methodology?

Research Method: All same-week, Permanent School Fund guaranteed, non-bank-qualified, current interest bond (CIB) sales are included in each weekly set of cost comparisons.

No interest cost difference was calculated for any maturity unless both competitive and negotiated sales had principal amounts in those years. Underwriting fee differences were calculated on the same principal maturities used to calculated interest cost savings. Capital appreciation bonds (CAB or zero-coupon) and issues not guaranteed by the Texas Permanent School Fund were excluded from cost calculations to maintain comparability.

We did not want to measure cost differences that resulted merely from changes in market interest rates when, for example, one issue priced Tuesday and another priced Wednesday. So, we calculated the extent to which each issue's yields to maturity (YTM) exceeded MMD (Municipal Market Data's national daily AAA annual and interpolated yield indices) as of its respective pricing date. This YTM spread to MMD became the basis for measuring whether competitive sales attained higher or lower interest costs than comparable negotiated sales. MMD's interpolated index was used through 2028 and MMD was used 2029 and longer to equate YTMs on August versus February principal maturities.

Notes:

Research Question: What is the potential difference in cost incurred by a Texas independent school district that elects to sell bonds using competitive (sealed-bid) sale, instead of a negotiated sale methodology?

Research Method: All same-week, Permanent School Fund guaranteed, non-bank-qualified, current interest bond (CIB) sales are included in each weekly set of cost comparisons.

No interest cost difference was calculated for any maturity unless both competitive and negotiated sales had principal amounts in those years. Underwriting fee differences were calculated on the same principal maturities used to calculated interest cost savings. Capital appreciation bonds (CAB or zero-coupon) and issues not guaranteed by the Texas Permanent School Fund were excluded from cost calculations to maintain comparability.

We did not want to measure cost differences that resulted merely from changes in market interest rates when, for example, one issue priced Tuesday and another priced Wednesday. So, we calculated the extent to which each issue's yields to maturity (YTM) exceeded MMD (Municipal Market Data's national daily AAA annual and interpolated yield indices) as of its respective pricing date. This YTM spread to MMD became the basis for measuring whether competitive sales attained higher or lower interest costs than comparable negotiated sales. MMD's interpolated index was used through 2028 and MMD was used 2029 and longer to equate YTMs on August versus February principal maturities.

Summary Total Cost Comparison -- Competitive Versus Negotiated Sale Process

Competitive Sale

\$ 132,155,000 Beaumont, TX ISD, PSF

PSF Rating: Aaa/AAA/NA
Underlying: A3/BBB+/NA
FA: USCA
Underwriter: Bank of America

Competitive Sale Underwriting Fee %: 0.807 %

Total Bond Principal Amount: \$132,155,000
Total Comparable Principal Amount: \$129,405,000

Additional Underwriting Fee from Selling Competitive:

0.807% - 0.487% = 0.320% \$ 414,544

Interest Cost Savings from Selling Competitively: \$1,137,342

Total Cost **Savings** from Competitive Sale Process: \$722,799

Negotiated Sale

\$ 310,915,000 Judson, TX ISD, PSF

PSF Rating: Aaa/NA/AAA
Underlying: Aa2/NA/AAFA: SAMCO
Underwriter: Citigroup

Negotiated Sale Underwriting Fee %: 0.487 %

Total Bond Principal Amount: \$310,915,000
Total Comparable Principal Amount: \$147,865,000

Underwriting Fee Savings from Selling Negotiated:

0.807% - 0.487% = 0.320% \$ 473,679

Additional Interest Costs from Selling Negotiated: \$ 1,056,908

Total Additional Costs resulting from the Negotiated Sale Process: \$583,229

^{*} MMD was unchanged 8/23-8/24.
